

# NA and NC Gasketed Plate Heat Exchangers

## Application:

Within the EcoFlex® product group, the NA and NC Series gasketed plate heat exchangers are independently certified as part of the ARI400 certification program by the Air Conditioning, Heating and Refrigeration Institute (AHRI). These two series cover the entire range of temperature and pressure for HVAC applications, with a complete selection of plate, gasket and port connection options:

- The NA Series performs well for a broad range of media, flows and temperature.
- The NC Series is for use with clean, low viscosity media in high pressure applications, and where close temperature approach (1°F) is required.

## Benefits:

### Peace of Mind

- Performance is independently certified by AHRI to the ARI400 standard, ensuring that the heat exchanger performs as predicted.
- Optional independent certification to ASME U-Stamp.
- Over 75 years of experience in crafting high performance plate heat exchangers.

### Versatility

- The right design, not a “good enough” design. Flexible design plus sophisticated software equal the perfect selection for your needs.
- Compact footprint allows use in locations that you wouldn’t dream of with a shell-and-tube heat exchanger.

### Long Service Life

- Careful corrugation design provides the ideal balance of high turbulence and proper fluid distribution, reducing fouling and clogging.
